AGENTIC AI DEVELOPER

Syed Adeel Waseem

Agentic AI Developer | AI Automation & RAG

I build AI-powered applications and business workflows using LLMs, retrieval systems, and structured AI-assisted development — specifying the intent, guiding implementation, and verifying the results at every step.

★ 1st Place — AI Seerathon 2026

Organized by Seerat Ki Duniya · Results: September 10, 2026 · Featured on official social media

Official winner announcement — AI Chatbot category

01 / Selected work

01 Seerah QA Bot

★ Hackathon Winner | Live

Questions about the Seerah need answers grounded in authenticated sources — generic LLM responses can be unsourced or drift into out-of-scope religious rulings.

APPROACH

Hybrid retrieval over a curated Seerah corpus: BM25 keyword search combined with semantic search, with citation validation enforced in code rather than prompts.

DETAILS

Pre-retrieval blocking of out-of-scope religious rulings; trilingual queries (English, Urdu, Roman Urdu); a baked-in corpus fallback so answers keep working when external APIs are unavailable.

DEMONSTRATES

A source-grounded QA system with deterministic safety and citation checks — 1st place at AI Seerathon 2026.

3	2×	Code-enforced
LANGUAGES	SEARCH MODES	CITATION VALIDATION

RAG | BM25 | Semantic search | Gemini | Next.js | TypeScript | Vercel

02 HVAC Revenue Recovery System

Live demo

HVAC contractors lose potential revenue when customer estimates go unbooked and past leads go dormant — manual follow-up is inconsistent and easy to forget.

APPROACH

A multi-tenant SaaS-style workflow that surfaces dormant leads and unbooked estimates, drafts AI-generated SMS outreach, and routes every message through human approval before sending.

DETAILS

HMAC-SHA256 webhook verification, Supabase Row Level Security, append-only audit logging, and circuit breakers that fail closed. Integrations with ServiceTitan and Twilio. Automated test suite; 22 SQL migrations.

DEMONSTRATES

Production-style safeguards around LLM-generated customer outreach: human-in-the-loop control, tenant isolation, and auditable messaging — delivered through structured AI-assisted development.

22	767	Tests
SQL MIGRATIONS	LINE ARCHITECTURE DOC	AUTOMATED SUITE

Multi-tenant · HITL · Supabase · Twilio · Next.js · OpenAI-compatible LLM

02 / How I Build AI-Powered Products

My work is not "open a tool and write a prompt." Each project follows a disciplined path from problem to verified delivery.

01

Understand the problem

Clarify the user or business need before touching any tools.

02

Define requirements

Turn the need into scope, constraints, and acceptance criteria.

03

Break it down

Split the system into manageable components with clear boundaries.

04

Reason about architecture

Work through data flow, APIs, integrations, and technical trade-offs.

05

Specify and guide implementation

Write structured specs that drive AI-assisted coding with precise intent.

06

Review the output

Check every result against the requirements and expected behaviour.

07

Test and iterate

Run tests, trace errors to root causes, and fix systematically.

08

Validate before shipping

Verify functionality, security, reliability, and safety — then consider it done.

03 / Additional Professional Experience

BACKGROUND ≈ 2.5–3 years

Lead Generation & Email Outreach

Prospect research, data management, and cold outreach

- Lead research and contact-data extraction
- Cold-email outreach and prospect-list management
- Organising and managing prospect data in Google Sheets
- Maintaining an organised end-to-end lead-generation workflow

Historical activity levels: approximately 100–150 leads researched per day and 50–150 cold emails per day — past workload, not guaranteed results.

04 / Education & Training

01 Agentic AI Architecture

In Progress

Panaversity — *The AI Agent Factory* learning program. Overall status: In Progress (2026).

FOUNDATIONS

Completed all 10 courses covering AI prompting, specification-driven and AI-assisted development, workflow design and diagnosis, skills and connectors, governance and responsible AI, and open-source LLMs.

GENERAL AGENTS

Studied the first 3 modules of the General Agents track; remaining modules in progress.

Note: Coursework in progress; this does not represent a completed degree, certification, or university accreditation.

05 / Hands-On Skills

Technologies and methods I have used in the projects above.

RETRIEVAL & RAG	04
RAG pipeline design	
Hybrid retrieval (BM25 + semantic)	
Citation validation & grounding	
Gemini API (LLM + embeddings)	

AI SAFETY & WORKFLOWS	03
AI safety guardrails	
Human-in-the-loop workflows	
Multi-tenant architecture	

ENGINEERING	04
Next.js & TypeScript	
Supabase / PostgreSQL (RLS)	
Vercel deployment	
Spec-driven AI-assisted development	

06 / Current Technical Focus

Areas I am actively studying and improving — not yet production-grade skills.

- Agentic workflows and orchestration
- AI output evaluation and validation
- Reliable AI systems and safety
- Structured AI-assisted software development

07 / Contact

Let's work together.

Available for Agentic AI opportunities in Islamabad or remote.
